

Chin Cup

- ◆ The Chin Cup is a soft removable appliance that provides a special force that braces alone cannot. This force is **Orthopedic in nature** and is used to slow the growth of the lower jaw.
- ◆ In a large majority of cases the Chin Cup can prevent the need for Orthognathic Jaw Surgery at a later date.
- ◆ The Chin Cup needs to be worn for a **minimum of 12 hours a day- primarily while sleeping**. *The more it is worn the better it will work.*
- ◆ Please bring your Chin Cup to **each visit** so we can adjust it and make sure that it is working properly.
